January 2000 – April 2005

Supervisor: Johann Mouton, D.Phil (no committee)

My dissertation, *The use of visual research methods in the South African research context*, reviewed the methodological and epistemological underpinnings of visual research methods pertinent to contexts often encountered within diverse societies. Internationally, many people continue to be marginalised as a result of race, ethnicity, culture, illiteracy, poverty, age, gender and sex. Within immense stratification, researchers working within a critical paradigm attempt to produce representative knowledge that contributes constructively to social change surrounding these groups. Image-based methods provide a research tool by which to address many of the concerns regarding challenging research contexts. Visual methods, such as photo-elicitation interviews surrounding self-produced images of participants, may facilitate communication between researchers and participants, in instances where researchers are crossing boundaries<sup>1</sup> of power, culture and language.

In this study, I argued the relevance of image-based methods to research that challenges and attempts to move beyond hegemonic discourses by exploring the methodological and epistemological underpinnings of visual research methods within the social sciences. I then set out a typology of methods well suited for use in a dialectic process of social change. Arguments established in the theoretical discussion were illustrated with a case study that explored the experience of motherhood for teenage mothers living in an informal settlement in the Cape Flats, Cape Town, South Africa. Participants produced photographs that reflected their own understanding and experiences of motherhood. Images created the focus of individual interviews with research participants allowing these young women to bring their own, ordinarily silenced voice, to a process centred on issues these women identified as crucial to their experiences. Images together with related narratives were analysed using social constructionist grounded theory<sup>2,3,4</sup> and an interlocking model of oppression that centred young mothers' narratives and their positioning within the 'matrix of domination'<sup>5</sup> of their everyday world. Emerging results were compared with relevant literature, providing a comparative component by which to assess the applicability of visual methods to the stated research context.

My course work included philosophy of science, advanced statistics and advanced monitoring and evaluation.

Supervisor: Lou-Marie Kruger, PhD (no committee)

My dissertation, *Low-income women and mental health care: An exploratory study of non-governmental health services in the West Coast/Winelands region of South Africa*, was a review of the extent to which primary mental health services are aligned with, and empowering to, a group of largely invisible women. Through a quantitative situation analysis<sup>6</sup> of organisations in the geographical region, the accessibility and theoretical underpinnings of services was reviewed. Findings demonstrated that although services and organisations often appear to be available to women in this region, this is usually not the case. Furthermore, many of these services lack a specific gender focus, engendering services, rendering many

women's health issues unimportant. Conclusions drawn from the study suggest the need to increase accessibility in order to accommodate the restrictive context of women in this region. Furthermore, in order for services to be effective, greater integration of their approach to interventions concerning both gender and the origins of mental health problems for women within the region needs is required. Finally, results highlight areas on which future research could focus, including language of service provision, how organisations understand available theories surrounding service provision, and the service needs of women in this region themselves.

Survey of resilience and risky behaviour in middle and secondary students  
Community Health and Epidemiology, Dalhousie University

*Role on the study:* To assess the construct validity of the Child and Youth Resilience Measure-10 (CYRM-10) against mental health and risky behavior measures embedded in the Student Use Drug Survey (SDUSAP). The purpose in developing and testing a short version of the CYRM is that it will be more suitable for inclusion in omnibus surveys such as the National Longitudinal Survey of Children and Youth. The survey includes approximately 3600 students from two Nova Scotia school boards and 1100 students from the two school boards in Prince Edward Island, Canada.

**Adjunct Professor**

November 2007 - June 2016

Dalhousie University  
Faculty of Health Professions**2 Limited Term Appointments: Assistant Professor**

September 2005 – May 2006

September 2006 – May 2007

Saint Mary's University  
Department of Sociology and Criminology

*Duties include:* Instructing first, second and third year sociology and criminology majors in *Introduction to Sociology, Introduction to Research Design, Introduction to Criminal Statistics* as well as honours students in a senior seminar, *Youth and Deviance across Cultures. Introduction to Sociology* incorporates several group and class discussions aimed at generating critical and reflective thought in students while simultaneously providing an overview of the various components of sociology. A strong ethical focus is brought to the *Research Design* course, with emphasis placed on subjectivity as well as the social reform power inherent in research. The *criminal statistics* course aims at providing students with basic statistical knowledge (descriptive statistics, t-tests, ANOVAs, and factorial analysis of variance) together with basic skills necessary to interpret quantitative research critically, being aware of the fallibility of statistical analysis and interpretation. *Youth and deviance across cultures* explores behaviour of youth, internationally, that is often construed as deviant. Causes of such behaviour are explored in relation to both popular media and scholarly theory, in an attempt to understand how youth navigate successful outcomes in the face of adversity and how society responds by labelling such strategies as deviant (please see attached teaching dossier).

Various *directed readings courses*, including the application of research methods in the South African context (master's IDS), support relationships for teenage mothers (honours, Criminology), and an introduction to grounded theory (honours, Criminology).
